## Online students travel the campus from their homes with robots controlled by a smart phone

April 22, 2015 12:00 pm by: Brooke Thomas Category: Features [Leave a comment](#) [A+](#) / [A-](#)

The Information Technology Department recently launched Geo, a remote-controlled telepresence device, that allows anyone from around the world to connect to ORU through live two-way video and audio streaming.

Noel Magwood, freshman online student, uses Geo to engage in classes from her home in Miami, Florida.

"I know that when operating the robot I am telepresent, but, quite frankly, I feel more present than I've ever been, as an ORU student," she said.
